How to Use Photoshop the Right Way Learn how to use Photoshop the right way by reading on! The first and most important thing to know is that a photograph is not a flat image — it's three-dimensional. A photograph of a landscape can be seen as a three-dimensional landscape, with light shining through it from above and through it from the sides. The image of that same landscape, however, is a flat image. When you photograph or scan a landscape, it's similar to a two-dimensional photograph of the top of a three-dimensional landscape, since the image will be flat. You may think you can get away with flat images by flattening images with the flatten command, but that doesn't work for photos with depth. The most important factor in making a flat photo 3D is to use a camera with a fisheye lens, which photographs a circle instead of a straight line. If you have a program like Photoshop, you have a tool called the fisheye crop tool that enables you to precisely crop away unwanted edges in a circular fashion. But that's not the only way to do it, so read on for additional tips for mastering Photoshop and its various tools. How to Clone and Move A Layer If you've ever used Photoshop, you know that it has a clone tool, which enables you to copy one layer onto another layer. If you find a specific layer on another layer or on a new layer, you may want to move it from one place to another. Photoshop has two layers: the background layer and the foreground layer. You can usually do this with the move tool on the Layers palette, which appears when you choose to edit either the background layer or the foreground layer. If you want to move a layer onto another layer, on top of the other layers, select it and choose Edit > Copy. Then choose Edit > Paste to place that layer on the new layer. Use Smart Objects to Create a 3D Photo Effect One of the most challenging things you can do in Photoshop is make a photo 3D-like, by creating a camera effect with layers. Start by making a new layer. Make sure you are editing the foreground layer. Keep your image open in the background and use the Rectangular Marquee tool. Drag over an area where there is interest. Make sure that you are using the Horizontal or Vertical style, and click the Free Transform (Ctrl

Q: Select query: How to query for a value of the "parent key" also? Given the following table: objno key parentkey ---------------------------- ---------- 1 NULL 2 1 3 2 How can I get the value of the parent key, for example. So for objno=2 I want the following result: objno key parentkey ---------------------------- --------- 2 1 3 2 The problem is that objno=2 has more than one parent (objno=1). So the WHERE clause should return the "parent key", and not
