The conversion add-in allows you to open and save ODF documents, edit them in MS Office Word in real-time, and save them back to ODF format. The tool is based on the following concepts: 1. Microsoft XML Paper Specification (MSP). 2. WordMLTools XML Schema Modification Package (XSLT). The transformation allows to map with XSLT any WordML Tools XML format to any ODF XML format. The mapping is achieved through the conversion between ODF and WordML Tools XSD files and an XSL file. The process starts with the conversion between the two ODF XML schemas. Then, two new WordML Tools XSD files are generated. Finally, an XSL file is generated from the resulting WordML Tools XSD files and the original ones. The add-in for Microsoft Office works in the following steps: 1. Open a ODF document. 2. Convert this document to WordML Tools format. 3. Import the resulting file into Microsoft Office. 4. Open the imported WordML Tools document in Microsoft Word. 5. Edit the document. 6. Save it in an ODF format. The conversion process is done in three steps: 1. Convert the document to WordML Tools format. 2. Import the resulting file into Microsoft Office. 3. Open the imported WordML Tools document in Microsoft Word. In the current version of the tool, two XML files formats are converted. These two formats are used during the import or export process. Microsoft Word uses the following schema to interpret a XML file. If the file is in the "mixedmode" format, it uses the [mspwmlxsd.xsd schema](to interpret the XML. This is indicated when Word changes the line "Contents of Package" from a capital letter to a lower case letter. The line "Contents of Package" indicates the XML file that is not part of Microsoft Office, and it is used to hold the XML of the WordML Tools. The following schema is used to convert the document to WordML Tools format: [b7e8fdf5c8

ODF Add-in For Microsoft Office

The goal for the ODF Add-in for Microsoft Office is to provide an Add-in to Microsoft Office to allow opening and saving OpenDocument format (ODF) files. The converter is based on XSL transformations between two XML formats, along with some pre- and post-processing to manage the packaging (zip / unzip), schema incompatibility processings and the integration into Microsoft Office. We chose to use an Open Source development model that will allow developers from all around the globe to participate and contribute to this project. Along with the Add-in for Microsoft Office, we also provide a command line translator that allows doing batch conversions. This translator could also be run on the server side for certain scenarios. ODF Add-in for Microsoft Office Impact: The Add-in for Microsoft Office is a shell around several components, the main component is the XSLT which allow the opening and saving of ODF documents. We chose to use this model because we did not want to provide some COM-component which would limits the environment it could run. By using an Open Source development model, we want to provide the community the possibility to get involved in our project. The initial goal is to be able to open and save ODF documents from within Microsoft Word. This Add-in is not yet complete and is still under active development. certain scenarios. ODF Add-in for Microsoft Office Features: ------------------------------------- The XSLT from the Add-in for Microsoft Office provides integration between Microsoft Office and OpenDocument. The converter is quite fast, compared to some other converters found on the web. A complete conversion of a 2 GB document can be done in less than 10 seconds. The speed could be improved, but there are plenty of optimizations possible. The converter handles recursively a depth list of folders (and sub-folders), that can be converted into zip archives. That makes the Add-in for Microsoft Office useful for documents that have many sub-folders. It would also allow converting a new documents, recursively, along with any other document if you already have the converter. The Add-in for Microsoft Office is tested on several versions of Microsoft Office with various combinations of windows installer and Office version. We have been very careful to give a generic version of the converter, and we don't recommend modifying the registry to force an older version to use the latest converter. Packaging: ---------- The Add-in for Microsoft Office is packaged as a Zip archive, ready to be deployed on a workstation or on the server of a company. Installation: ------------ The Add-in for Microsoft Office should be installed as Microsoft Office.
