Solid Edge ST10 MP11 Update; 2017-11-09Siemens Solid Edge .Q: How to call methods in a class on an object using a string? I'm creating an abstract parser which will parse a file to a string. I am then wanting to call a method in a class from the string. For example, I have a string "a + b". This contains the string "a" and the string "b". What I want to do is output "a is greater than b" I know this isn't far enough into the project for me to be calling methods, but I'm just trying to get the general idea. Is this possible? I'm also open to changing my code to make it "better". I've created a simplified example below.

```
class one:
    def __init__(self, arg1, arg2, arg3):
        self.arg1 = arg1
        self.arg2 = arg2
        self.arg3 = arg3
class two:
    def __init__(self, arg1, arg2, arg3):
        self.arg1 = arg1
        self.arg2 = arg2
        self.arg3 = arg
```
