Q: Can we use .net open api to build a web service I know the most .net technologies like WCF/SOAP, WCF REST also have their own specification to build the service. I came to know .NET open API yesterday, but there is no specification how to build a web service by using .NET open API. Is it possible to create a web service that maps to .NET open api? Can you advice me any tutorials that can help me to build service using .NET open API and expose it over WCF to build RESTful services

A: There is no open-source standard API to build web services by using .NET open API, because it only provides a few constructs that can be used to build REST API, SOAP, RESTful, etc.. You can build an API using .NET open API, but it is up to you to decide how you do that and how easy/difficult that will be to do. I believe that a good starting point would be to use that API, then adapt that to WCF. That being said, WCF is open source so you should be able to adapt that if you wish.

A: Yes, you can use open APIs to build an open source framework, but there aren't any examples out there. In some sense, your question is a broad one that has been discussed at length for decades. The best solution is to find a solution, which you have successfully achieved. One example of something that was open source (and is still open source) was the Orleans framework. It's currently in the process of being open sourced, but there is plenty of support for Orleans in the .NET ecosystem.

Q: varnish on nginx I'm currently trying to get varnish working for my nginx web server. I can see the varnish logs (Nginx), but I am not able to view the responses in my browser. My site is hosted in: The main problem I think is that I do not understand how to allow access to the varnish logs. I have a test.
