Time Lapse Breast Growth

Breast growth time-lapse breastfeeding. 18 month breast growth time-lapse I shot this time lapse of my daughter during her 2nd and 3rd trimesters. We used a Nikon D5 and a Canon 550D.Q: CSS class naming conventions in Java I'm currently working on a project, I use Spring MVC to develop and JSP to display the results. What is the best way to name classes/stylesheets? I'm new to Java and CSS, so I'd like to avoid using some sort of randomly generated string. The method I use to choose a class name is, while loading the JSP, select the classes/stylesheet to use. For example, I have a class called home, and I would like to call it with something like this: I then use this CSS code: Is it better to give the CSS a file name and load it like this? Or is it better to give the class a name and load it like this? I'm currently leaning towards the second way. I believe it will make it easier to locate the CSS file later on. A: For me, it's always best to put stylesheets for the same page in the same file. I don't think you need to generate a random string - there are only so many files, so it doesn't really matter if they are named like /css/home.css or /css/home-home.css. You can also use the classname as the filename, like so: A: I would not use a random string to name your classes. You can use the name of your JSP file to name your CSS classes. For example if you have a JSP named "index.jsp" you can name your CSS file to "index.css". The CSS file will be automatically scanned by the browser, so if you add a new class you don't need f988f36e3a
