And maybe this should be the last thing I see. The documentation really could be better. The truth is that we often do not notice that an error or a bug was listed in the manual. Actually, now that I think of it, this is just one of the main reasons why we consider the Camera Panel and Camera Raw a problem. The Camera Raw panel is helpful and perfect for editing RAW images, but at the same time, it has almost no manual. You can definitely learn the basics and what it is capable of doing by looking through the various previews, but you will never be able to find out and understand all the nuances and properties of an image. We, the consumers, also know this. Therefore, I believe that the documentation could be much more elaborate than the actual process. The navigation panel could play a much bigger part in all software actions, since it's the panels that are performing tasks, just like with the PhotoAcoustic Media Reader.

We've already mentioned the fact that if you have any kind of graphics experience, you need to pay attention to one feature in Lightroom that comes with every major photography software package: Camera Raw. And if you download Lightroom for free, you should also get the manual, as well as the tutorials and some other helpful resources. I am, however, a little upset with one thing: Why isn't there a different color for the "Delete" option in the Radial Filter tool for future reference? I am talking about that very useful, blue-colored one. I know that the standard Lightroom tools have a white background by default, but that is distracting.
